

TECHNICAL PROSPECTUS 2026

The Guardian Protocol: Sovereign AI Infrastructure

Human Reclassified Foundation | A 501(c)(3) Public Benefit Corporation

I. THE PROBLEM: THE POST-TRUTH ERA

By 2026, the cost of generating high-fidelity synthetic media has dropped to near-zero. Automated agentic AI now accounts for 70% of digital interactions. For the individual, the "Trust Gap" is no longer a nuisance; it is a systemic threat to financial and personal security.

II. THE SOLUTION: THE GUARDIAN PROTOCOL

The Guardian Protocol is a decentralized, open-source intelligence layer that resides on the user's device.

- **Local Analysis:** No data leaves the device.
- **C2PA Verification:** Real-time provenance checking for digital media.
- **Agentic Defense:** Identifies AI-driven psychological manipulation in real-time.

III. THE NONPROFIT ADVANTAGE

Why a Foundation? To ensure the "Human Firewall" remains a public good. The Guardian Protocol cannot be acquired, pivoted for profit, or used as a surveillance tool by corporate entities.

IV. 2026 ROADMAP & CAPITAL ALLOCATION

We are seeking **Catalytic Capital** to:

1. Finalize the C2PA-Integrated SDK for mobile OS.
2. Scale our Track 2 Research Fellowships.
3. Launch the "Global Agency Initiative" to protect 5M vulnerable users.
